Employee database (CASSANDRA)

Question -

Perform the following DB operations using Cassandra.

1. Create a keyspace by name Employee
2. Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary, Dept_Name
3. Insert the values into the table in batch
3. Update Employee name and Department of Emp-Id 121
4. Sort the details of Employee records based on salary
5. Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee.
6. Update the altered table to add project names.
7.Create a TTL of 15 seconds to display the values of Employees.

LIBRARY DATABASE (CASSANDRA)

Question -

Perform the following DB operations using Cassandra.

1.Create a keyspace by name Library

2. Create a column family by name Library-Info with attributes

Stud_Id Primary Key,

Counter_value of type Counter,

Stud_Name, Book-Name, Book-Id, Date_of_issue

3. Insert the values into the table in batch

3. Display the details of the table created and increase the value of the counter

4. Write a query to show that a student with id 112 has taken a book “BDA” 2 times.

5. Export the created column to a csv file

6. Import a given csv dataset from local file system into Cassandra column family

MONGODB SAMPLE

Question -

Perform the following DB operations using MongoDB.

1. Create a database “Student” with the following attributes Rollno, Age, ContactNo, Email-Id.
2. Insert appropriate values
3. Write a query to update Email-Id of a student with rollno 10.
4. Replace the student name from “ABC” to “FEM” of rollno 11.
5. Export the created table into local file system
6. Drop the table
7. Import a given csv dataset from the local file system into mongodb collection.

```
use studentdb
switched to db studentdb

db.createCollection("student_details")
{ "ok" : 1 }
